AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A method for identifying a candidate compound that treats for treating a neoplasia, said method comprising the steps of:

(a) contacting a cell comprising a loss of function mutation in a Class B synMuv gene having at least 95% sequence identity to SEQ ID NO: 24 selected from the group consisting of: mep-1, lin(n3628), lin(n4256), and lin-65 and a second loss of function mutation in a Class A synthetic multivulval gene, or an ortholog thereof, with a candidate compound;

(b) detecting cell proliferation a phenotypic phenotype alteration in said contacted cell relative to a control cell; wherein a candidate compound that alters the phenotype of said contacted cell relative to said control cell is a compound that treats a neoplasia. and

(c) comparing said cell proliferation in said contacted cell to cell proliferation in a control cell, wherein said control cell is not contacted with said candidate compound,

wherein a decrease in cell proliferation in said contacted cell relative to a said control cell identifies a candidate compound for treating a neoplasia.

2. (Original) The method of claim 1, wherein said cell is in a nematode.

3. (Original) The method of claim 1, wherein said cell is an isolated mammalian cell.

4-21. (Canceled)

22. (New) The method of claim 1, wherein the Class A synthetic multivulval gene is lin-15A or lin-38.

23. (New) A method for identifying a candidate compound for treating a neoplasia, said method comprising the steps of:

(a) contacting a cell comprising a loss of function mutation in a Class B synMuv gene having at least 95% sequence identity to SEQ ID NO: 26 and a second loss of function mutation in a Class A synthetic multivulval gene with a candidate compound;

(b) detecting cell proliferation in said contacted cell; and

(c) comparing said cell proliferation in said contacted cell to cell proliferation in a control cell, wherein said control cell is not contacted with said candidate compound,

wherein a decrease in cell proliferation in said contacted cell relative to a said control cell identifies a candidate compound for treating a neoplasia.

24. (New) The method of claim 23, wherein the Class A synthetic multivulval gene is *lin-15A* or *lin-38*.

25. (New) The method of claim 23, wherein said cell is in a nematode.

26. (New) The method of claim 23, wherein said cell is an isolated mammalian cell.

27. (New) A method for identifying a candidate compound for treating a neoplasia, said method comprising the steps of:

(a) contacting a cell comprising a loss of function mutation in a Class B synMuv gene having at least 95% sequence identity to SEQ ID NO: 28 and a second loss of function mutation in a Class A synthetic multivulval gene, with a candidate compound;

(b) detecting cell proliferation in said contacted cell; and

(c) comparing said cell proliferation in said contacted cell to cell proliferation in a control cell, wherein said control cell is not contacted with said candidate compound,

wherein a decrease in cell proliferation in said contacted cell relative to a said control cell identifies a candidate compound for treating a neoplasia.

28. (New) The method of claim 27, wherein the Class A synthetic multivulval gene is *lin-15A* or *lin-38*.

29. (New) The method of claim 27, wherein said cell is in a nematode.

30. (New) The method of claim 27, wherein said cell is an isolated mammalian cell.

31. (New) A method for identifying a candidate compound for treating a neoplasia, said method comprising the steps of:

(a) contacting a cell comprising a loss of function mutation in a Class B synMuv gene having at least 95% sequence identity to SEQ ID NO: 2 and a second loss of function mutation in a Class A synthetic multivulval gene with a candidate compound;

(b) detecting cell proliferation in said contacted cell; and

(c) comparing said cell proliferation in said contacted cell to cell proliferation in a control cell, wherein said control cell is not contacted with said candidate compound, wherein a decrease in cell proliferation in said contacted cell relative to a said control cell identifies a candidate compound for treating a neoplasia.

32. (New) The method of claim 31, wherein the Class A synthetic multivulval gene is *lin-15A* or *lin-38*.

33. (New) The method of claim 31, wherein said cell is in a nematode.

34. (New) The method of claim 31, wherein said cell is an isolated mammalian cell.
